

PEMBROKE REGIONAL HOSPITAL

MEMO

TO: All Staff and Physicians

FROM: Infection Prevention and Control

DATE: February 8th, 2022

SUBJECT: Outbreak Surgical

The COVID-19 outbreak on the inpatient surgical unit was declared over on February 7th, 2022 by the Renfrew County and District Health Unit.

Daily rapid antigen testing for outbreak surveillance is no longer required by staff and physicians working on the surgical unit. Anyone working on the surgical unit who is completing daily rapid tests for work self isolation (WSI) purposes must continue this testing requirement until their period of WSI is complete.

Thank you to everyone for your patience and support as we navigated through this outbreak situation. With early identification of positive and exposed patients, staff and students we were able to quickly interrupt the transmission of COVID-19 on this unit.
